

**Amendment to the Claims:**

The listing of claims will replace all prior versions, and listings of claims in the application:

**Listing of Claims:**

1. (Currently Amended) A media content delivery system, comprising:

a system database for storing a plurality of media files;

a user input device for selecting selected media files from the plurality of media files in said database to be outputted;

an output device for outputting of the selected media files;

an external data interface for receiving media files for storage in the system database;

an integrated circuit card interface adapted to hold an integrated circuit card having encoded thereon criteria for accepting the received media files for storage in said database; and

a media content delivery system controller, responsive to selection by said user input device of at least one of the selected media files stored in said database, to apply the at least one selected media file to said output device for outputting, and responsive to receipt by said external data interface of media files, to compare each of the received media files received from the external data interface with the criteria from the integrated circuit card, and the controller control is further adapted to store in said media system database only the received media files

received by said external data interface which meet criteria on the integrated circuit card held in said integrated circuit card interface; and wherein

the plurality of media files stored by the system database are not stored in the integrated circuit card.

2. (Original) A media content delivery system as claimed in claim 1, wherein said user input device comprises a keyboard.

3. (Original) A media content delivery system as claimed in claim 1, wherein said user input device comprises a mouse.

4. (Original) A media content delivery system as claimed in claim 1, wherein said user input device comprises an electronic interface.

5. (Original) A media content delivery system as claimed in claim 1, wherein said output device comprises a video output device.

6. (Original) A media content delivery system as claimed in claim 1, wherein said output device comprises an audio output device.

7. (Original) A media content delivery system as claimed in claim 1, wherein said output device comprises an electronic interface.

8. (Original) A media content delivery system as claimed in claim 1, wherein said external data interface comprises a wire connection.

9. (Original) A media content delivery system as claimed in claim 8, further comprising a server connected to said wire connection.

10. (Original) A media content delivery system as claimed in claim 9, further comprising a computer connected to said server.

11. (Original) A media content delivery system as claimed in claim 1, wherein said external data interface comprises a wireless connection.

12. (Original) A media content delivery system as claimed in claim 11, further comprising a server connected to said wireless connection.

13. (Original) A media content delivery system as claimed in claim 12, further comprising a computer connected to said server.

14. (Original) A media content delivery system as claimed in claim 1, wherein said external data interface comprises a compact disc read only memory drive.

15. (Original) A media content delivery system as claimed in claim 1, wherein said external data interface comprises a digital video disc drive.

16. (Original) A media content delivery system as claimed in claim 1, wherein said external data interface comprises a computer disk drive.

17. (Original) A media content delivery system as claimed in claim 1, wherein said integrated circuit card interface is adapted to hold an integrated circuit card having encoded thereon criteria identifying an e-mail address, and said external data interface is adapted to receive e-mail for the identified e-mail address.

18. (Previously Presented) A media content delivery system as claimed in claim 1, further comprising an integrated circuit card having encoded thereon the criteria for accepting media files for storage in said database.

19. (Original) A media content delivery system as claimed in claim 18, wherein the criteria are encrypted.

20. (Original) A media content delivery system as claimed in claim 18, wherein the criteria include an e-mail address.

21. (Original) A media content delivery system as claimed in claim 1, further comprising a kiosk housing said database, said user input device, said output device, said integrated circuit card interface, said external data interface, and said controller.

22. (Currently Amended) A process of updating files in a system database of a media content delivery system including a media content delivery system controller, said process comprising the steps of:

- (a) receiving at the media content delivery system an integrated circuit card having encoded thereon criteria for selecting media files;
- (b) receiving at the media content delivery system at least one media file; and
- (c) comparing the at least one media file received by the media content delivery system with criteria from the integrated circuit card and if the received media files meet the criteria, storing in the system database of the media content delivery system only media files received at the media content delivery system which meet the criteria encoded on the integrated circuit card.; and wherein  
the at least one media file stored in the system data base is not stored in the integrated circuit card.

23. (Original) A process as claimed in claim 22, wherein step (b) comprises connecting the media content delivery system to an external data source, and receiving the at least one media file from the external data source.

24. (Original) A process as claimed in claim 23, wherein step (b) comprises connecting the media content delivery system to the external data source by a wire connection.

25. (Original) A process as claimed in claim 23, wherein step (b) comprises connecting the media content delivery system to the external data source by a wireless connection.

26. (Original) A process as claimed in claim 23, wherein step (b) comprises connecting the media content delivery system to a server.

27. (Original) A process as claimed in claim 23, wherein step (b) comprises connecting the media content delivery system to a computer.

28. (Original) A process as claimed in claim 22, wherein step (b) comprises receiving an audio file.

29. (Original) A process as claimed in claim 22, wherein step (b) comprises receiving a video file.

30. (Original) A process as claimed in claim 29, wherein step (b) comprises receiving a video game.

31. (Original) A process as claimed in claim 29, wherein step (b) comprises receiving a movie.

32. (Original) A process as claimed in claim 29, wherein step (b) comprises receiving a text file.

33. (Original) A process as claimed in claim 32, wherein the text file is a newspaper.

34. (Original) A process as claimed in claim 32, wherein the text file is an e-mail file.

35. (Original) A process as claimed in claim 22, wherein the media content delivery system includes a compact disc read only memory drive, and step (b) comprises inserting a compact disc read only memory into the compact disc read only memory drive, and receiving the at least one media file from the compact disc read only memory.

36. (Original) A process as claimed in claim 22, wherein the media content delivery system includes a digital video disc drive, and step (b) comprises inserting a digital video disc into the digital video disc drive, and receiving the at least one media file from the digital video disc.

37. (Original) A process as claimed in claim 22, wherein the media content delivery system includes a computer disk drive, and step (b) comprises inserting a computer disk into the computer disk drive, and receiving the at least one media file from the computer disk.

38. (Previously Presented) A media content delivery system in accordance with claim 4 wherein the electronic interface comprises:

a mobile wireless device using a short-range communication link coupling the mobile wireless device to said database.

39. (Previously Presented) A media content delivery system in accordance with claim 38 wherein:

the mobile wireless device uses a Bluetooth link coupling the mobile wireless device to said database.

40. (Previously Presented) A media content delivery system in accordance with claim 1 wherein the criteria comprise:

an identification of at least one type of file which may be accepted for storage in said database.

41. (Previously Presented) A media content delivery system in accordance with claim 4 wherein the criteria comprise:

an identification of at least one type of file which may be accepted for storage in said database.

42. (Previously Presented) A media content delivery system in accordance with claim 7 wherein the criteria comprise:

an identification of at least one type of file which may be accepted for storage in said database.

43. (Previously Presented) A media content delivery system in accordance with claim 18 wherein the criteria comprise:

an identification of at least one type of file which may be accepted for storage in said database.

44. (Previously Presented) A process in accordance with claim 22 wherein the criteria comprise:

an identification of at least one type of file which may be accepted for storage in said database.

45. (Previously Presented) A process in accordance with claim 23 wherein the criteria comprise:

an identification of at least one type of file which may be accepted for storage in said database.
